

A complete cement factory to Mongolia

The DS-Spedition delivers a whole cement factory to Mongolia

The DS-Spedition as a specialist for project business was instructed by an international customer to supply a cement factory to one of the most uneconomical parts on the edge of the Gobi desert.

To supply the individual part deliveries of the facility with a size of more than 53,000 cubic metres on time, an international project team did a time analysis and also manufacturability analysis. They were summarised and presented to the client.

The following challenges (extract) had to be solved:

- Total volume: 53,209 cubic metres
- Total weight: 12,585 tonnes
- Individual parts of the facility were delivered from all over Europe and Asia (Turkey, India and China)
- The individual parts had excess height and excess width
- The customer gave reduced delivery time frames for the individual parts
- Extensive international paperwork
- The delivery place was difficult to access for special transports

About the DS-Spedition
