

Drinking Water for Haiti

DS-Spedition provides aid for earthquake victims in Haiti

Solving highly complex logistics challenges needs extensive experience! Particularly in conflict areas after natural disasters logistics is the main problem. Destroyed sea- and airports, inaccessible infrastructure and the lack of contact persons indicate this problem.

In cooperation with the Grünbeck Water Treatment Company, which manufactures mobile drinking water treatment equipment and the Bavarian State Ministry for Environment and Health, DS Spedition could provide extensive support to Haiti.

DS Spedition, under the coordination of the Medical Disaster Relief Organisation Germany R.A. (MHW e.V.), based in Munich, took over the Bavarian logistics. The equipment weighing nearly 2 metric tons could quickly be transported to the Central American earthquake zone. With its capacity of 1000 liters of drinking water it provides a

large proportion of the assistance to the local people. The staff responsible for this task could thus make their share of aid to Haiti.

With its head office in Munich and branches in Berlin, Cologne, Hamburg and Moscow, DS Spedition provides full service and is your preferred partner in all logistics and external supply chain issues. Whether transport by truck, combined freight transport, storage logistics or special logistics – DS Spedition has special units offering optimal solutions to its customers for each task.
